DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitation "wherein the memory device is controlled so that read data is read out successively, when a word line to be activated, of the plurality of word lines is switched to another word line to be activated." (claim 1, lines 15-17) is unclear. How can a word line to be activated be switched to another word line to be activated?

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Art Unit: 2818

4. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Tanizaki et al.

Tanizaki et al. discloses a memory device having all the elements as recited in claims 1-6 as follows:

- a matrix of memory cells (Fig. 13);
- a plurality of sense amplifiers (Fig. 14, sense amplifier 47 for each bit line pair); and
- read gate and write gate (Fig. 14, 50 and 60), wherein the memory device is controlled so that read data is read out successively when a word line to be activated to be activated is switched to another word line to be activated (page 3, left column, section [0026] to section [0029].

The word line to be activated switched to another word line to be activated after a read operation is inherent.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hidaka discloses a semiconductor memory device allowing increase in capacity and operation speed with a suppressed layout area.
